
(a) primes $p \geq 5$, for $3 \nmid n$, and the odd primes
$\prod p/(p-1)$ over the k primes
$k = 8$
$k = 33$
$k = 7$
16001, Proposition 2.5(i)
$k = 100470$
the first primes from 5 on
independent primes from 5 on, chosen one at a time
the first odd primes
(b) 3 and the primes $p \equiv 2 \pmod 3$, for $3 \mid n$
$k = 1540$
$10^8 + 2$, Proposition 2.5(ii)
3 and the first primes $p \equiv 2 \pmod 3$
3 and independent primes $p \equiv 2 \pmod 3$, chosen one at a time
number k of primes
