Declaration of AI assistance

Mathematics of Computation

Author-prepared disclosure; not an official publisher form or signature.

Manuscript. Lehmer's totient problem with fewer than sixteen prime factors

Human authors. Deep Bhattacharjee.

Claude through Claude Code assisted the original search programs, computational development, partial Lean work and drafting. OpenAI Codex assisted the ceiling and one-candidate reductions, targeted valuation and residue investigations, independent primality certificates, checking the stated finite reproductions, figures, editing and packaging. These efforts do not provide a full-conjecture proof.

Human oversight. The submitting author stated on 25 October 2026 that the text is a mix of human-written and AI-generated material and that all parts have been checked and understood by a human. This records that author declaration. Human authors retain responsibility for mathematical accuracy, citations and the final version; AI systems are not human coauthors.

Verification scope. The repository contains partial Lean results for statements not depending on the exhaustive search. The full searches and the full Lehmer conjecture are not claimed to be Lean-formalised.

Supporting record. The separate AI_PROVENANCE.md identifies the documented tasks and tools. No unprovided model version, human signature, confidential transcript or journal approval is asserted.
