
record $n = A_j\, p_k$
(no case occurs)
sequence
$S = (p_1, \ldots, p_j)$
no $p_i \mid p_l - 1$
R1 ratio test
$P_j\, \Gamma_j(q_1) > \mu(S)$?
yes
R2 deficit test
$V_j(\mu(S)) \geq \theta_{j+1}$?
yes
R3 last prime
$\mu \leq M < P_j \frac{p_j+2}{p_j+1}$
R4 children $q > p_j$
omit by (i), (ii), (iii)
no
discard S
no
discard S
each child $(p_1, \ldots, p_j, q)$ is treated in the same way
